She graduated in 1991 from Radboud University in Nijmegen, then embarked on scientific research and worked simultaneously in private practice. In 2006 she decided to return to clinical work and started her private practice, specializing in assessments and treatment of intercountry adoptees of all ages. Her journey of finding the right treatment for these often early traumatized clients, led her to EMDR, Theraplay, Dyadic Developmental Psychotherapy, the Neurosequential Model of Therapeutics and Sensorimotor Psychotherapy, in all of which she sought training and supervision. The last decade the focus in all her work has shifted to the body and body based interventions. In her clinical work she combines elements of all approaches she was trained in, but ever since she certified in Sensorimotor, this approach is in the lead. She has a combined practice with children, youth, parents, parent-child dyads, families and adults, all of whom touched by adoption or foster care experiences.</p>
